

Toggle Monthly/Annual Flow — Maintenance Update: Team/Bundle Plans with Term-Aware Pricing

Summary

Introduce a **Team/Bundle Plans** feature that leverages the existing monthly/annual toggle. Users can purchase multiple products in a single bundle, and pricing adapts dynamically when the toggle is switched. This reduces confusion across multiple SKUs, improves transparency, and encourages larger conversions.

Context & Links

- Current toggle flow enables switching between monthly and annual terms for individual plans.
- Limitation: no bundled plan support, leading to repetitive checkout flows.
- Related artefacts: Pricing page toggle scenarios (*“Switch between monthly and annual toggle multiple times”*), checkout/payment (*“I make payment on checkout page”*), upgrade modal (*“Multiple products should be displayed on upgrade modal”*).

Current vs Future Flow

Stage	Current Flow (Individual Plan)	Future Flow (Bundle Enabled)
Pricing Page	Toggle updates plan list (annual ↔ monthly) per plan.	Toggle updates bundle price, showing aggregate pricing with discounts.
Plan Selection	User selects one plan only.	User can select bundle (e.g., Live + Automate).
Checkout	Payment page calculates pricing for a single SKU.	Checkout applies term-aware pricing for the bundle, validates discounts, and presents combined invoice.
Summary Page	Subscription overview shows one active plan with chosen term.	Overview displays bundle composition,

		each product aligned to the chosen term.
--	--	--

Impacted Artefacts

- **Pricing Page:** Bundle selector alongside existing plans.
- **Upgrade Modal:** Must display all products in bundle, aligned with toggle term.
- **Checkout/Payment:** Adjust for proration and discount rules when bundles selected.
- **Summary/Overview:** Render multiple products under one subscription with correct billing term.
- **APIs:** Pricing API (bundle schema), Checkout API (bundle discounts), Subscription API (term alignment).

Acceptance Criteria

- Pricing page adapts bundle pricing when toggling monthly ↔ annual.
- Bundle selector available and functional on pricing page.
- Checkout supports bundle purchase; proration and discounts calculated correctly.
- Upgrade modal shows all bundle products; terms remain consistent.
- Summary page reflects bundle composition and chosen term.

Timeline

- Phase 1: Internal bundle testing (SMB accounts)
- Phase 2: Public beta (opt-in)
- Phase 3: Full rollout with enterprise bundles

FAQ

Q: Will bundle discounts apply to both monthly and annual?

A: Yes, discounts scale with term length; annual bundles receive additional incentives.

Q: How does proration work if switching bundle mid-cycle?

A: Same as individual plans; prorated amounts calculated per product and aggregated in checkout.

Q: Can legacy plans be bundled retroactively?

A: Only if migrated to supported V4 pricing plans.
